PERFORMANCE MONITORING OF METHOD CALLS

AND DATABASE STATEMENTS IN AN APPLICATION SERVER

5   ABSTRACT

In one embodiment, a method for monitoring performance of one or more
methods and one or more database calls each associated with at least one method,
includes correlating a database call generated by a method with the method that
generated the database call.   The method also includes monitoring one or more
10   parameters associated with the database call and displaying to a client a first identifier
of the database call, a second identifier of the method that generated the data base
call, and one or more of the one or more parameters associated with the database call.
